

## MAS 90

## MAS 200

Client/Server

Client/Server for SQL Server

### BENEFITS

#### Easy Deployment

Best handles installation and configuration of the e-Business Manager ISAPI plug-in for you. Images and stylesheets are posted with Microsoft FrontPage Server extensions directly from within the MAS 90 and MAS 200 applications.

#### Inexpensive

Avoid the expense of purchasing and maintaining Microsoft Internet Information Server in-house.

#### Free Corporate Web Site

If your company doesn't already have a corporate Web site, you may sign up for a free site with the Best SiteCreator program.

### SUPPORTED PLATFORMS

MAS 90

MAS 200

Client/Server

Client/Server for SQL Server

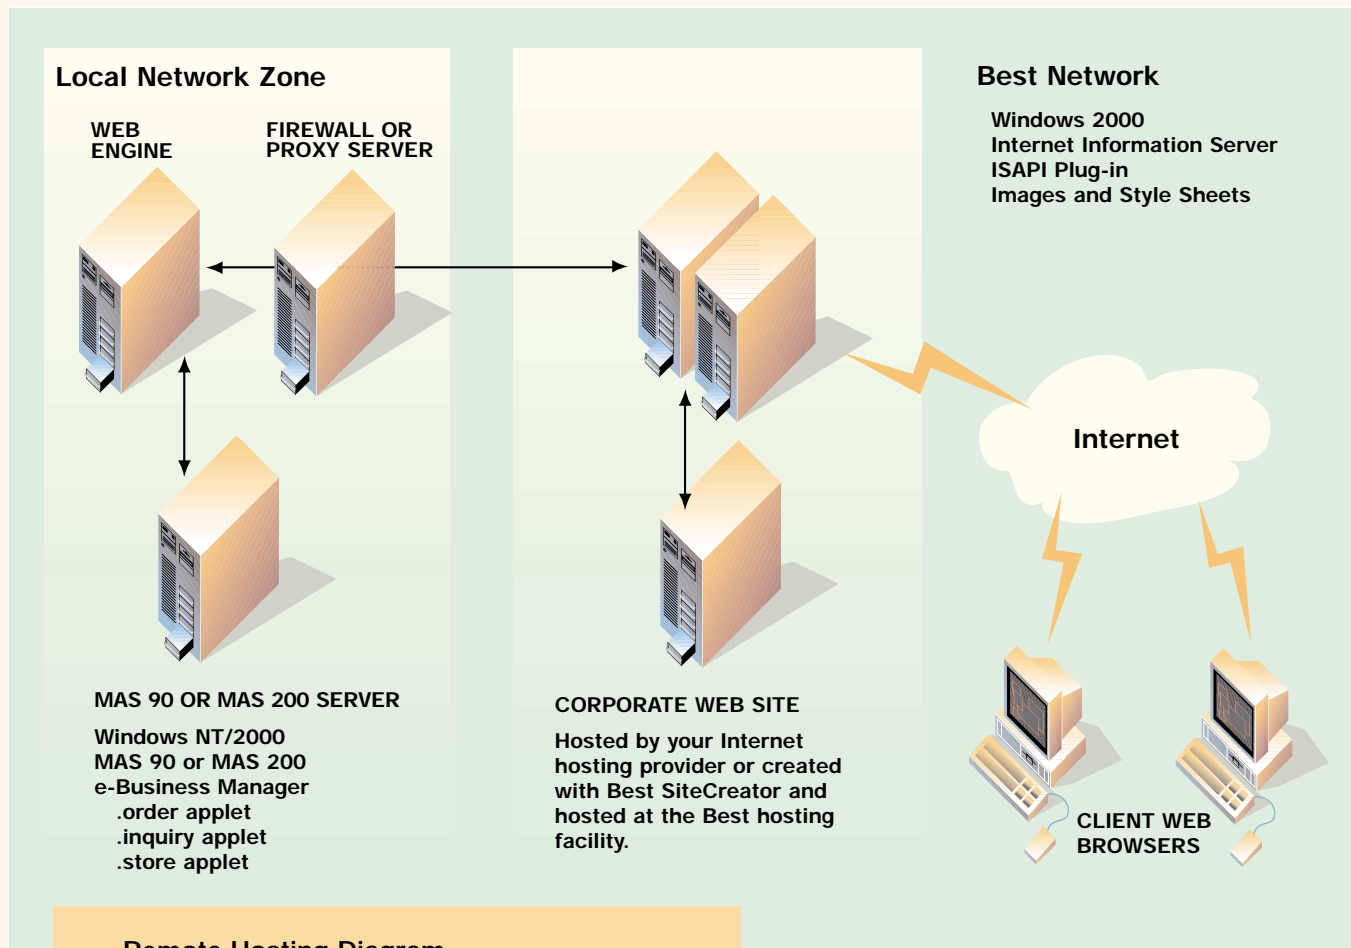

Looking for a host for your e-business Web site? Why not choose the host designed specifically for the MAS 90 and MAS 200 e-Business Manager module?

Best Hosting Services is Best Software's simple, inexpensive and ideal Web hosting solution for MAS 90 and MAS 200 customers. Created on a platform designed specifically for the e-Business Manager module, Best Hosting Services is based upon Microsoft's Internet Information Server for Windows 2000. Designed to host components of e-Business Manager, Best Hosting Services can allow you to get your Web site up and running quickly. Sign up for Best Hosting Services and you'll have access to the following features:

- Hosting of the e-Business Manager ISAPI plug-in and up to 100 megabytes of Inventory Item images.
- Microsoft FrontPage Server extensions which make it easy to publish e-Business Manager images and content.
- Secure Socket Layer (SSL) support available for secure Web transactions.\*

Sign up for hosting with Best Hosting Services today, or for more information visit: [www.bestsoftware.com](http://www.bestsoftware.com)

\*Customer may be required to purchase an individual SSL certificate to enable secure communications with client browsers.

### Remote Hosting Diagram

In this illustration, the e-Business Manager components reside on a Windows 2000 server within the Best network. The ISAPI plug-in for Microsoft's Internet Information Server facilitates secure communication through the firewall. Communications between the local network zone and the Best network are handled via DSL or another dedicated connection.

In this example, the Web engine resides on a separate Windows 2000 server. Depending upon network configuration and system load, this component may coexist with MAS 90 or MAS 200 and/or other applications.
